Subject: Animal Testing Trials Summary

OVERVIEW

The following documents the trials run on several animals of various species and conditions.

SUBJECTS

Subject 1:

- Species: Felis catus - Domestic Shorthair
- Gender: Male
- Age: 5
- Obtainment Details: PETA Facility; To be put down
- Health: Blood tests came back normal apart from minor feline miliary dermatitis; though blood tests may not be completely accurate.
- Exposure Details: 3MG of the liquid form applied to small feline miliary dermatitis that the subject was afflicted with at their time at the PETA facility
- Outcome: Roughly one minute and twenty seven seconds after applying the material, all signs of the dermatitis were gone and hair completely regrew to match the rest of the hair in that area.
- Relocation: Given to researcher "Susan [REDACTED]" to continue monitoring in a home environment.

Subject 2:

- Species: Capra hircus - Pygmy
- Gender: Female
- Age: 2
- Obtainment Details: Purchased at an undisclosed location for \$3200904231167.14437091414912746172541

- Health: Good physical condition, minor bruises and the blood tests came back with no abnormal results.
- Exposure Details: Fed a 1MG [REDACTED] pill
- Outcome: After roughly 43 seconds the goat was immediately more energetic and all abrasions were healed.
- Relocation:

Subject 3:

- Species: Canis familiaris - Beagle
- Gender: Female
- Age: 3 Months
- Obtainment Details: Adopted from the Humane Society
- Health: Great except for minor cuts from unknown sources
- Exposure Details: 1MG applied to a cut directly.
- Outcome: All cuts on its body were healed.
- Relocation: Given to researcher "Maria [REDACTED]" to continue monitoring in a home environment.

Subject 4:

- Species: Felis catus - Domestic Longhair
- Gender: Male
- Age: 16
- Obtainment Details: Research found wandering around outside of researcher "Alan [REDACTED]"'s apartment
- Health: Malnutrition, severe dental decay, advanced joint degeneration, limited mobility, dermatitis, early signs of liver dysfunction, and chronic respiratory infection; likely from exposure to harsh elements.
- Exposure Details: Given a 20MG [REDACTED] pill, swallowed willingly
- Outcome: Complete health regeneration, the cat was suddenly walking around and rubbing against people. It seemed to look far younger than it should.
- Relocation: After health was confirmed, was given to researcher "Alan [REDACTED]" to continue monitoring in a home environment.

Subject 5:

- Species: Pantherophis guttatus
- Gender: Female
- Age: 2
- Obtainment Details: Shipped from Lafayette, Louisiana
- Health: Apart from some minor physical trauma, great health
- Exposure Details: given 25 2MG pills
- Outcome: Became approximately 20x bigger, became violent
- Relocation: Put down and put into plastic bin for further experimentation

P.S. The researchers requested I inform you the subjects were named “Clover”, “Skippy”, “Aingu”, “May”, and “Svaro” respectively
